Microsoft Cloud App Security POC

ⓘ **Remote 1-Day Workshop | 1.500 €**

Microsoft Cloud App Security as Cloud Access Security Broker

Microsoft Cloud App Security (MCAS) is a is a multimode Cloud Access Security Broker (CASB). It gives you rich visibility, enables you to control how your data travels, and provides sophisticated analytics to identify and combat cyber threats – across all of your cloud services. It helps you discover, protect and respond to threats.

Have an overview about MCAS and its capabilities

— Security Overview
— E5 Security Framework
— Zero Trust

Investigate your cloud apps and detect shadow IT

— Implementation
— Configuration
— Integrations & APIs

Manage your cloud apps and detect threats

— Shadow IT
— Detect Threats with MCAS
— Manage Cloud Apps and Files
